

ABSTRACT

- A process for the production of backing foils provided on one side with an uncured or at most partially cured transparent coating and, on the
- 5 side of the coating remote from the foil, with an image, the process comprising the successive steps:
- a) providing a backing foil provided on one side with an uncured or at most partially cured transparent coating of a curable coating composition and
- 10 b) providing the side of the coating remote from the foil with an image, in particular by printing.
